CAMBRIDGE *with* ARMORTEC®

After an amazing vacation a lot of homeowners are overcome with that old familiar feeling of not wanting to return to “normal” everyday life. Where are the never ending water features and outdoor bars? Where are the accommodating staff members asking if they can be of any service, and replying with “my pleasure” in return? Reality sets in and the water features become a washing machine and shower, the refrigerator becomes the closest thing to a “wet bar,” and your family’s responses to your needs are generally less than accommodating. Vacation is over, and so are the lazy days filled with rest and relaxation.

It is back to business as usual. Weekdays that seem to drag on and weekends that seem to be over in the blink of an eye. Gone are the easy breezy feelings that come along with vacation. You and your family long for those days, and wonder if it is possible to recreate those feelings again without having to get on a plane or rent a hotel room.

This is when the wheels start turning in your head. How can I create a “resort-like” feeling in my own backyard? Over the years you may have visited friends’ homes and admired backyards full of pavers, fire pits, and even outdoor kitchens and bars. This is when you think to yourself, why can’t I create a space I would never want to leave, and would look forward to coming home to all year round?

Well, you can with Cambridge Pavers with ArmorTec®! Visit us online today to find an authorized distributor near you. Here you can begin your journey by looking at all of the colors, sizes, textures, and products we offer. Next, you can meet with a contractor who will be able to help your vision come to life and can even show you digital designs based on your current backyard space.

Even if you cannot execute the whole project all at once, just know that in time and with proper planning you will accomplish your end goal. Your contractor can work with you in phases that will accommodate your budget, which will make the whole process seem way less overwhelming.

Therefore, my advice to anyone who is looking to extend their living space beyond their four walls is to visit Cambridge Pavers’ website. This is the first step in creating the perfect stay-cation in your very own backyard.

Thank you for considering Cambridge,

Charles H. Gamarekian
Founder / Chairman / CEO, Cambridge Pavers Inc.

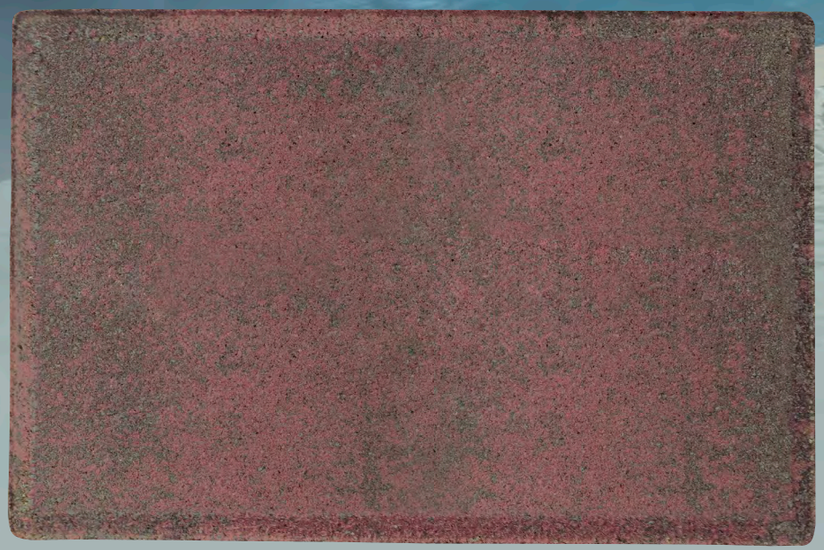

Christopher S. Gamarekian

XL Smooth 24 X 36 SAHARA/CHESTNUT LITE

CAMBRIDGE PAVER **WITH ARMORTEC®***

Installed in a residential driveway in June 2006 *(photo taken January 2010)*

After many years of outstanding performance and beauty, Cambridge Pavingstones with ArmorTec® remain recognizably smooth and dense with rich color. The sustainable benefits are a result of a proven formula used in manufacturing ArmorTec® – only environmentally friendly raw materials, super fine sand granules, and cement of the highest quality.

**Shown is a Cambridge face mix pavingstone manufactured with ArmorTec® face mix installed in 2006.*

PAVINGSTONE **WITHOUT ARMORTEC®†**

Installed in another residential driveway in November 2006 *(photo taken Jan. 2010)*

Without ArmorTec®, the Pavingstone will look less attractive as the sand and cement wear over time. This detracts from the appearance of the surface and contributes further to their worn look.

†Shown is a Cambridge through-body pavingstone intentionally manufactured without ArmorTec® face mix installed in 2006.

- 150K BTU, 24” Penta Burner produces even flame in flower-like pattern
- 32” inside diameter, 48” outside diameter, 16” high
- Shown in Split Face Limestone Quarry Blend with Cast Stone Ring Bluestone

Fully-Assembled Gas Fire Table

F
- Bullnose footrest
- 60" diameter table ring in choice of Black Uba Tuba or Venetian Gold Granite
- Natural Gas (Liquid propane conversion kit available)
- 150K BTU, 24" Penta burner produces even flame in flower-like pattern
- Includes lava rocks (glass fire beads optional - 60 lbs. required)
- 32" inside Diameter, 60" outside diameter, 29" high
- Available in Toffee/Onyx w/ Granite Table Ring Black Uba Tuba & Bullnose Footrest Bluestone Blend
- Shown in Sahara/Chestnut with Granite Table Ring Venetian Gold & Bullnose Footrest Chestnut

CHOOSE AN OPTIONAL RING KIT FOR YOUR FIRE PIT

Designed for Olde English, Garden Wall and Pyzique Round Fire Pits available in:

- Cast Stone (3 pieces; 3" thick) - Bluestone or Chestnut
- Granite (2 pieces; 1 1/2" thick) - Black Uba Tuba or Venetian Gold
- Bullnose (4 pieces; 2 3/4” thick) - Bluestone or Chestnut

Cast Stone, Granite or Bullnose Ring has to be purchased and installed at the same time as the fire pit because of different installation requirements for these products (firebrick & heat sensitive mortar).

CAMBRIDGE GLASS FIRE BEADS

(Optional Glass Fire Beads needed: 60 lbs. - Round Fire Pits / 50 lbs. - Square Fire Pits)

NOTE: Do not cover natural gas burner completely with glass fire beads to ensure your unit will burn properly.

AVAILABLE GLASS FIRE BEAD COLORS

- Shown in Split Face Limestone Quarry Blend

**Fire pit grates are designed to cantilever over the fire for cooking. Installation instructions included.*

CAMBRIDGE BARBEQUE & FIRE PIT SPARK SCREEN

This optional stainless steel screen is durable and hinged for easy access to the fire and offers protection from flying embers. Fits onto all square and round barbeque & fire pits.

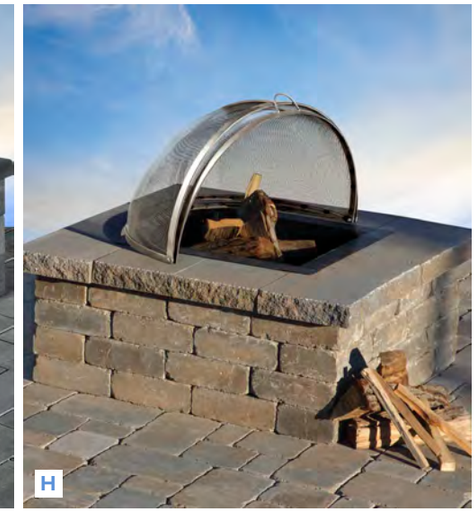

CAMBRIDGE BARBEQUE & FIRE PIT COVER

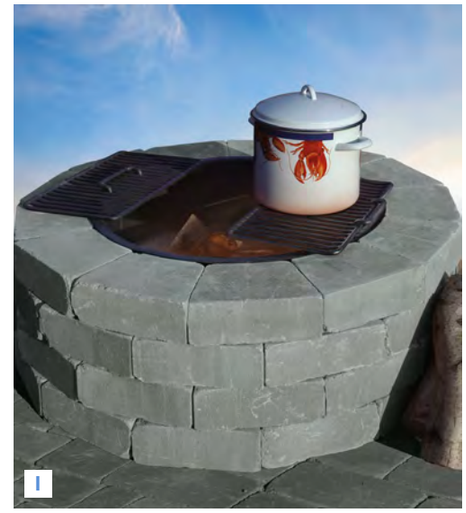

This optional galvanized steel cover prevents dirt and debris from entering the fire pit when not in use. Fits onto all Square and Round Barbeque & Fire Pits.

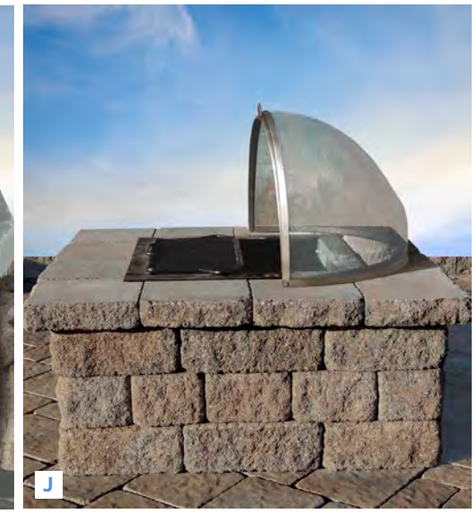

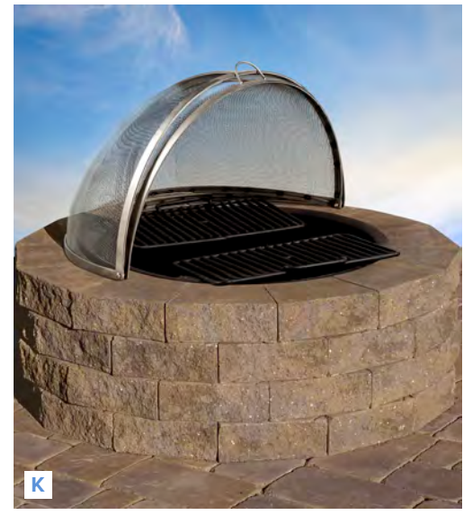

NOTE: An open fire will damage the Spark Screen. It has been specifically designed and engineered for containing sparks and embers only.

ACCESSORY

Duomo Pizza Oven by COYOTE Outdoor Living

B Indulge in the art of outdoor cooking with the DUOMO wood-fired outdoor pizza oven. Crafted to perfection, the DUOMO redefines the way you experience homemade pizzas. The one piece seamless design along with the three stage active heat management system, will transport you to the heart of traditional Italian pizzerias, where the unmistakable smoky aroma and blistered crusts create a culinary journey like no other.

- One Piece Seamless Dome
- Active Heat Management System
  - » Double Insulation
  - » Interior Flame Channel
  - » ThermoShift Chimney System
- Front Smoke Escape Design
- Ceramic Cooking Bricks
- Temperatures up to 1,000 degrees
- 4 Piece Toolkit Included
- 40" W x 33 9/16" D x 54 13/16" H
- Available colors: Copper, Yellow and Matte Black

Engineered for efficiency and ease, the DUOMO offers precise temperature control, ensuring every pie emerges with a perfect balance of crispiness and tenderness. The durable construction and insulated body retain heat for consistent performance, allowing you to explore a diverse range of dishes beyond pizzas – from rustic bread to succulent roasted meats.

FREQUENTLY ASKED QUESTIONS

CAN PAVINGSTONES BE SEALED, AND IF SO ARE THERE ANY SPECIFIC GUIDELINES?

Alliance Gator, our supplier of sealers and cleaners, recommends waiting 1 year before sealing, since the efflorescence bleeding process is unpredictable. Before sealing any surface one must ensure that there is no efflorescence in the pavers. Efflorescence is a natural process. It is a condition which occurs in all cement based products, as well as in many other paving products. The condition will usually correct itself with time and exposure to the elements. Sealing is a personal choice based on aesthetic preferences, but is not necessary. Prior to sealing, the pavingstones must be cleaned with an efflorescence cleaner.

DO YOU HAVE ANY TIPS ON REMOVING COMMON STAINS FROM CONCRETE PAVINGSTONES?

All pavements will stain. Under foot and vehicular traffic, they can become exposed to dirt, stains and wear. This is common to all pavements. The below tips address various steps to ensure the durability of interlocking concrete pavements. We recommend hiring a professional for power washing.

Remember, one of the main advantages of concrete pavingstones versus asphalt or concrete is if a stain cannot be removed - the PAVER CAN!

We received these recommendations from Alliance Gator, as well as from contractors. Cambridge Pavers, Inc. does not warranty or guarantee these cleaning methods will work and does not assume any responsibility for the actions of those attempting to clean. Prior to applying the suggested cleaning agent to a large area, test on one or two pavingstones to make sure you are satisfied with the results. If you can, please choose a paver in an area not easily seen.

Asphalt and emulsified asphalt - Use Alliance Rubber, Paint and Tar Remover. Follow the directions and reapply if necessary. You can also try the following: chill with ice (if warm outside) and scrape away the excess with a hard plastic scraper. Apply Alliance XP Oil and Grease remover and follow directions on the container.

Cutback asphalt & roofing tar - Use Alliance Rubber, Paint and Tar Remover and follow the directions.

Blood, candy, ketchup, mustard and grease drippings from food - Use liquid dish soap and let penetrate 20-30 minutes. Scrub and rinse with hot water. You may also use Oxyclean mixed 4 scoops to a gallon of hot water. Let soak for 15 minutes, scrub with a nylon bristle brush, and rinse.

Caulking - Scrape off excess and scrub with a poultice of denatured alcohol and rinse with hot water and liquid dish soap.

Acrylic latex caulk - Use Alliance Rubber, Paint and Tar Remover or Alliance Eco Soy Stripper and follow guidelines for removal of dried paint.

Chewing gum - Same as caulking.

Clay Soil - Scrape off dry material. Scrub and rinse with hot water mixed with Alliance Shampoo.

Creosote - Apply a poultice with paint thinner and talc. Scrub and allow to dry. Scrape off and scrub with scouring powder and rinse with water.

Efflorescence - Use Alliance Efflorescence Remover. Dilute according to instructions on container. Apply and rinse with water.

Leaf stains - Use Clorox Pro Results Outdoor Bleach and follow the instructions for application. Of course- be sure to test one paver at a time. The cause of the problem is leaves which fall annually. This will continue to happen so a decision has to be made whether to live with or remove the tree.

Wood rot, mulch or tobacco stains - Use Oxyclean 4 scoops to a gallon of hot water. Apply and let soak for 15 minutes. Scrub with a nylon bristle brush and rinse with water. You may also use Pool Shock. Wet the entire surface to be cleaned then mix 1/2 lb of pool shock with 4 gallons of water. Apply, scrub, and rinse off.

Mold and mildew - Use Oxyclean or pool shock (follow same directions as above).

Mortar - Extremely difficult to remove. If mortar is fresh and not hardened, try Alliance Efflorescence Remover. Scrub and rinse with water. Reapply if necessary. It may be necessary to replace the paver.

Oil or grease that has penetrated - Soak up excess with rags and apply Alliance XP Oil & Grease Remover. Leave on for 6-8 hours till it dries to a powder and sweep off. Also works on antifreeze, brake fluid, hydraulic oil and citronella wax.

Paint - Fresh paint should be mopped up immediately with rags or paper towels by blotting. Do not wipe as this will spread the stain. Soak and then scrub the area with hot water, scouring powder and a stiff brush until no more improvement is seen. Let the remaining paint dry and remove as described below.

Dried paint - Scrape any excess oil based paint, varnish or water based latex paint off the surface. Use Alliance Rubber, Paint and Tar Remover or Alliance Eco Soy Stripper and follow the directions on the container. Another option is to purchase a commercial paint remover and follow the directions. Loosen with gentle scrubbing. Do not rub the loosened paint into the surface of the paver. Instead, blot up the loosened paint and thinner. Repeat as necessary. Note: latex paints once dried are more difficult to remove.

Soot from smoke - Use a solution of trisodium phosphate (TSP) diluted to directions on container. Scrub and rinse with water.

Tire skid marks - Use Alliance Rubber, Paint and Tar Remover or scrub the black area with water, detergent and scouring powder. In the case of small stained areas, removal and replacement of marred pavers may be an easier option.

Rust - Define the source of the rust stain (e.g.: sprinklers, patio furniture, fertilizers) and eliminate it to prevent re-occurrences. Apply Alliance Rust Remover and scrub with a stiff bristle brush. Multiple applications may be necessary. Follow directions accordingly. Test a small area of pavers first. Note: Rust Remover will damage a sealer.

CAN PAVINGSTONES BE INSTALLED ON A CONCRETE BASE?

As long as the Concrete Masonry & Hardscapes Association (CMHA) Construction details are followed.

CAN PAVINGSTONES BE INSTALLED ANYWHERE INSTEAD OF ASPHALT OR POURED CONCRETE?

Yes. Choose Cambridge Pavingstones with value-added ArmorTec for any paving project. An interlocking Cambridge Pavingstones system will instantly improve your home's appearance and increase its appraised value. With dozens of shapes and colors to choose from, design possibilities for driveways, walkways, patios & pools, sunrooms and other areas are endless.

HOW DO CAMBRIDGE PAVINGSTONES HOLD UP COMPARED TO ASPHALT AND POURED CONCRETE?

Cambridge Pavers are more durable. Interlocking pavingstones are an engineered pavement system and are used at airports, taxiways, container ports, industrial and corporate campuses as well as on streets for urban renewal projects.

WHAT MAKES PAVINGSTONES SO STRONG?

They are made of high-density concrete. Cambridge Pavingstones are twice as strong as and less absorbent than poured concrete. The mortarless, flexible, interlocking system won't crack or heave as a result of ground movement. Ugly patches are a thing of the past.

CAN ARMORTEC® COME OFF?

No. ArmorTec® and the paver are, in fact, one. ArmorTec®, also referred to as "hardfacing," has been field-proven for over 70 years in Europe, where pavingstone technology originated and continues to evolve.

CAN PAVINGSTONES BE INSTALLED OVER EXISTING PAVEMENT?

Yes. Cambridge Pavingstones can be used as an overlay over existing concrete patios and walkways as well as asphalt driveways. Costs incurred for removal and disposal of existing asphalt or concrete are therefore eliminated. Follow Concrete Masonry & Hardscapes Association (CMHA) guidelines.

ARE PAVINGSTONES SLIPPERY?

No. Pavingstones surpass the standards for slip-resistance set by the Americans With Disabilities Act.

CAN PAVERS BE PLOWED?

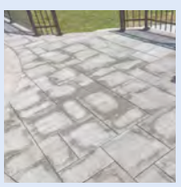

All pavements can be damaged by steel plow blades. Concrete Masonry & Hardscapes Association (CMHA) recommends using a rubber-edged plow blade.

CAN DE-ICING CHEMICALS BE USED ON PAVERS?

We recommend using sand as the preferred method for providing skid and slip resistance. If using de-icer we recommend only sodium chloride (NaCl). De-icer should be applied sparingly. Once loosened, snow and ice should be promptly removed to avoid a build-up in the concentration of the de-icing chemical. Do not use products that contain a blend of chemicals.

WHY ARE MY PAVERS HOLDING WATER?

Drainage is a key component to any hardscape installation. If pavers are staying wet this means there is water underneath your pavingstones and proper drainage needs to be addressed with your hardscape contractor to resolve. Proper base installation guidelines can be found in our warranty.

CONCRETE MASONRY & HARDSCAPES ASSOCIATION

FREQUENTLY ASKED QUESTIONS

Congratulations! You have recently improved your property with strong, colorful and attractive Cambridge pavingstones. As a proud owner, you have invested in a long-lasting, durable, yet flexible pavement that adds value to your real estate. A truly beautiful yet practical pavement graces your property. If your project is about to begin, you can anticipate enhancing your property with the best paving system for your money.

WHAT IS EFFLORESCENCE?

There is a chance that after a few weeks or months pass, a white haze may appear on the surface of the pavers. This is known as efflorescence. It may appear randomly or in certain areas, and will be more pronounced on dark colored pavers. The white haze may give the impression that the color of the pavers is fading. When wet, the white disappears and the color of the pavers is enhanced. When they dry, the white haze reappears.

EFFLORESCENCE IS COMPLETELY NATURAL & WILL DISAPPEAR WITH TIME

There is no reason to be concerned that your pavers are damaged or defective. The concrete pavers are going through a natural process. It is a condition that occurs in all cement-based products, as well as in many other paving products. The condition will usually correct itself with time and exposure to the elements.

WHEN WILL EFFLORESCENCE STOP?

When the supply of calcium hydroxide is exhausted. If you live in an area of frequent rain and sunny days, efflorescence and its passing may occur quickly. The process may take much longer in drier climates.

WILL IT GO AWAY NATURALLY?

Since many factors are involved in its formation, it is difficult to determine when efflorescence will stop. Just as it appears naturally, efflorescence will eventually disappear. Over time, rainwater can wash and wear it away. In urban areas with acidic rainfall, efflorescence may go away faster than in rural areas.

CAN IT BE REMOVED WITHOUT THE WAIT?

Yes, efflorescence may be cleaned with commercially available cleaners formulated specifically for concrete pavers. Cleaning should be performed immediately after efflorescence has appeared. It may reappear as long as the chemical reaction continues and cleaning may need to be done until efflorescence has stopped.

Most cleaners contain acid and detergents, so be sure to follow all label directions and environmental regulations. Careless or improper cleaning can result in injury, damage, and discoloration to the surface of the concrete pavers. Always conduct a test in a small, inconspicuous area before applying any cleaner to the entire area of concrete pavers. After cleaning, the pavers should be completely dry and free from efflorescence prior to applying any sealers.

THE CHEMISTRY OF EFFLORESCENCE

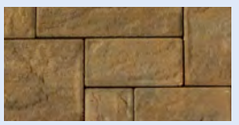

All concrete products contain cement which produces lime or water soluble calcium oxide. Lime can also be in the bedding sand, aggregate base materials, or soil. Although concrete pavers are solid, strong, and very dense, they contain millions of microscopic capillaries that run from the interior to the surface. Moisture from rain, sprinkler systems, underground sources, poor site drainage, or dew enters these microscopic capillaries. Calcium oxide inside the paver reacts with the water in the capillaries and forms calcium hydroxide. This rises to the surface, reacts with the carbon dioxide in the air, and forms a white haze of calcium carbonate. When moisture on the surface evaporates, the white haze of efflorescence becomes visible.

Pavers

Pavers with efflorescence

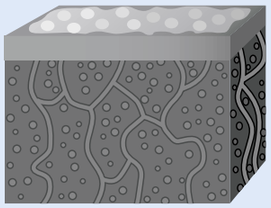

Pavers

Pavers with Polymeric Haze

Efflorescence emerged from pores within a magnified area of a concrete paver. The calcium has been carried to the surface by water.

ELIMINATING EFFLORESCENCE

Most producers of pavers put chemical additives in the concrete to reduce the likelihood of efflorescence. Completely eliminating the chance of efflorescence, however, isn't possible because it's a natural byproduct of hardened concrete. It will stop when no more calcium hydroxide is available to move to the surface. There are cleaners available that can remove efflorescence. These will enhance the natural beauty of your concrete paver project. Consult your paver supplier to find an appropriate cleaner.

POLYMERIC HAZE

Polymeric haze from the use of polymeric joint sand may appear on your concrete products if the sand was not removed from the surface of the paver properly. This does not affect the integrity of the product or your installation. The hazing will weather away naturally with time and rain or it can be removed with a specialized cleaner. You are advised to contact your contractor. Cambridge Pavers, Inc. accepts no responsibility or liability for this occurrence.

For more information, visit www.CambridgePavers.com or www.MasonryAndHardscapes.org (the trade association representing the interlocking concrete paving industry)

START PLANNING TODAY AND MAKE YOUR OUTDOOR DREAMS COME TRUE!

Ever feel like time is flying by? In the blink of an eye, your outdoor patio plans keep getting pushed aside because life gets in the way. Before you know it, another year has come and gone. Why not make your backyard dreams come true with Cambridge Pavers, so you can sit back, relax, and enjoy life outdoors all four seasons!

So many homeowners dream of creating a beautiful backyard but don't know where to start. Here are some simple tips on the best way to go about the planning process.

The first thing you need to do is ask yourself is, "How do I envision myself using this space?"

» Are you looking to host family & friends?
Consider incorporating a Fully Assembled Kitchen and Fireplace into your design to create the ultimate outdoor living room.

» Are you looking to create a space where you can relax and unwind?
Consider adding a Bar Kit, Bistro or Pub Table, and Fire Pit to create the perfect stay-cation destination.

» Are you looking to create a space you can enjoy all year 'round?
Add a Pavilion and an Eternal Flame into your design, and be covered in style.

Any home improvement endeavor is an investment, so take time planning your outdoor space and picking the right contractor for the job. Need help finding a contractor? Then visit our website and click on Need a Pro Installer, located under the Homeowners tab on the homepage. *Once you have decided on products and colors, and executed a contract be sure your contractor places an order with an authorized Cambridge Distributor immediately to ensure timely delivery.*

Beauty images in a catalog or on social media are great for inspiration, but you must see products and colors in person to be sure before making the final decision. Want to visit an authorized dealer near you? Then *visit our website* and click on the *Dealer Locator tab.*

Most importantly, you do not have to accomplish everything on your wish list all at once. Be transparent with your contractor about your budget so that everyone is on the same page. That way, he or she can plan to work with you **in phases over time, to meet your ultimate goal.**

THE CAMBRIDGE FULLY-TRANSFERABLE **LIMITED LIFETIME WARRANTY**

Cambridge Pavers Inc. warrants to the owner that, should a Cambridge pavingstone or wallstone, installed according to Concrete Masonry & Hardscapes Association (CMHA) installation guidelines, prove defective, it will be replaced without cost. Replacement labor is not included. THIS WARRANTY IS TRANSFERABLE WITH VALID PROOF OF PURCHASE.

Cambridge Pavers like any other concrete products and or natural stone will not resist staining and or environmental debris build up. Anything outdoors whether man-made or natural will suffer Mother Nature's wrath when exposed to the elements 24/7, 365 days a year. Therefore, if you want to keep your pavers looking good it will entail some maintenance on your part. This can easily be cleaned with dish soap and water or something more substantial depending on the type of stain. We cover all the ways to care for your pavers if you do come across a stubborn stain on page 92.

NOTE: Efflorescence is a whitish powder deposit that sometimes appears on concrete products. It has no affect on the structural integrity of the pavingstones or wallstones and will wash and wear off over time. The use of concrete setting beds may also increase the possible occurrence of efflorescence. Because this is a natural occurrence, Cambridge Pavers, Inc. accepts no responsibility or liability for this condition. Cambridge Pavingstones are made from natural, environmentally-friendly material, and therefore, variations in color may occur. Cambridge Pavers may have pyrite (iron mineral, red in color) that appear on the surface of the stone which can occur in any natural products or products that utilize natural materials (sand, aggregate, cement) i.e. concrete pavers. Because this is a natural occurrence, it in no way affects the structural integrity of the pavingstones or wallstones. Cambridge Pavers, Inc. accepts no responsibility or liability for this condition.

Polymeric haze from the use of polymeric joint sand may appear on your concrete products if the sand was not removed from the surface of the paver properly. This does not affect the integrity of the product or your installation. The hazing will weather away naturally with time and rain or it can be removed with a specialized cleaner. You are advised to contact your contractor. Cambridge Pavers, Inc. accepts no responsibility or liability for this occurrence.

NOTE: Cambridge Pavers, Inc. is offering the Alliance Gator Base product based on customer requests. The use of this product is not covered under Concrete Masonry & Hardscapes Association (CMHA) guidelines or Cambridge's warranty. All warranty claims will be forwarded directly to Alliance.

NOTE: Custom colors as well as pavers with Blue and Shell pigments do not have color throughout. Cambridge Wallstones are made without ArmorTec®.

SNOW REMOVAL equipment should have the proper rubber blade guards to protect the surface of the pavers. Cambridge Pavers is not responsible for any damage caused by snow removal equipment, which may leave burns and scuff marks on pavers.

NOTE: De-icing chemicals — We recommend using sand as the preferred method for providing skid and slip resistance. If using de-icer we recommend only sodium chloride (NaCl). De-icer should be applied sparingly. Once loosened snow and ice should be promptly removed to avoid a build-up in concentration of the de-icing chemical. Do not use products that contain a blend of chemicals.

IMPORTANT NOTICES: [#1] A bolt-on urethane protection mat must be attached to the plate compactor as a precaution against surface scuffing on all Cambridge textured products. A roller compactor is preferable when installing slabs. Installation guidelines must follow those as instructed by the Concrete Masonry & Hardscapes Association (CMHA). [#2] Ledgestone Cap and 12 x 24 Coping have a sharp edge due to the manufacturing process. Contractors should utilize a grinder against the sharp edges to soften it. You will see some aggregates appear after this process but it will help prevent issues with the end user scratching or cutting themselves.

In order to make a claim under this Warranty, the owner must return the defective pavingstone or wallstone to the dealer who sold the product. **Any implied warranties of merchantability and/or fitness for a particular purpose are limited as stated above.** The exclusive remedy under this Warranty is replacement of a defective pavingstone or wallstone. Cambridge's responsibility is limited to the cost of the product only and not to the costs related to the installation or replacement of said products. Cambridge Pavers Inc. shall not be liable for incidental or consequential damage arising from any breach of warranty. Some states do not allow limitations on how long an implied warranty lasts, or the exclusion or limitation of incidental or consequential damages, so the above limitations may not apply to you. Any court action making a claim under this Warranty must be commenced within one year of the date on which the defect was, or in the exercise of reasonable care, could have been discovered. This Warranty gives you specific legal rights, and you may also have other rights which vary from state to state. **Any suit involving a warranty claim shall be brought In the Superior Court of New Jersey, Bergen County.** The laws of the State of New Jersey without regard to its conflict of law provisions shall govern all issues in all warranty claims.

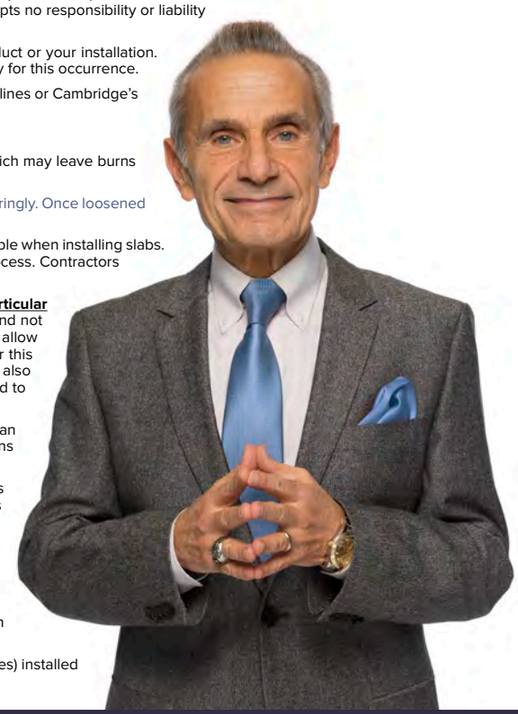

Cambridge adheres to ASTM Designation C 936-82 standards as found on our website. Vehicular applications should be accommodated through pavingstones with an aspect ratio of 3:1 or less. Units with an overall length to thickness aspect ratio of 4:1 or greater should not be used in vehicular applications (CMHA Technical Specification 10). An example of a Cambridge product not suitable for vehicular applications is the Ledgestone XL which has an aspect ratio greater than 4:1; this product should only be used in pedestrian applications (sidewalks, patios, walkways, etc.).

NATURAL STONE DISCLAIMER: Cambridge Pavers does not offer a warranty on any of our Natural Stone products including Outdoor Porcelain Tiles. Natural stones may also have pyrite (rust) in the stones which can occur in all natural products. Cambridge Pavers Inc. has partnered with quarries from around the world to offer Natural Stone products. Unlike manufactured stone, Natural Stone will vary in terms of color, pattern and texture, because these are products of nature and not man-made. There are no two pieces alike when it comes to Natural Stone that is what makes these products beautiful and unique. Natural Stone products delivered to your home may not be an exact product match to what you might have seen in a show room or in our brochure.

Natural Stone products last , but if you want to keep them looking good, some general maintenance is necessary. Natural Stone products can stain and become scratched, because they contain naturally porous surfaces. To avoid staining from occurring keep surfaces clear of dirt, damp leaves, acidic products, and oils. If any of these things do come in contact with your Natural Stone remove them as soon as possible by cleaning them with soap and water. If this method does not work Natural Stone cleaning products can be found in your local building material store, but be sure to avoid any cleaners containing acids.

Sealing Natural Stone comes to personal preference. Some people feel unsealed stones get better looking with age, while others feel sealing their stones aids in easier clean up and less maintenance, although this is not a guarantee. If you choose to seal your stones always do a test patch in a spot that is not very noticeable to ensure you are happy with the end result.

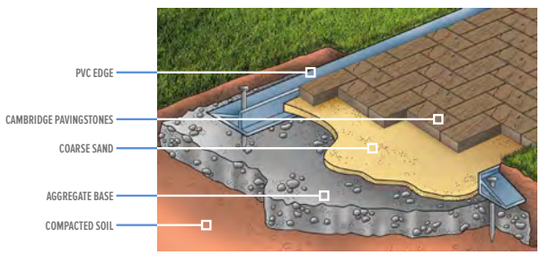

THE CAMBRIDGE CAST STONE PRODUCTS WARRANTY: Cambridge Pavers, Inc. warrants to the original purchaser (with a proof of purchase) that should Cast Stone products (Steps, Caps and Stepping Stones) installed according to industry standards and in compliance with our installation guidelines, prove defective upon installation.

BASIC PAVINGSTONE & WALLSTONE INSTALLATION

HOW TO INSTALL YOUR CAMBRIDGE PAVINGSTONES SYSTEM

Step 1 Preparation: Sketch a diagram of area to be paved. Square off a 90° corner. Set stakes for outside perimeters 6" away from area. Establish finished height and slope by setting leveled string lines. Allow 1" drop every 8' at sides for water runoff.

Step 2 Excavation: Excavate (7 1/2" for patios and walkways / 11 1/4" for driveways).

Step 3 Base: Fill area with quarry process gravel (4" for patios and walkways / 8" for driveways). Flatten, compact and slope.

Step 4 Edging: Install PVC restraints to prevent spreading.

Step 5 Placing (Screeding) Sand: Add coarse C-33 sand and smooth out to a uniform 1".

Step 6 Pavers: Place Cambridge Pavingstones on the smooth sand in the desired pattern making sure joint lines are straight. A built-in spacer bar assures consistent joint width.

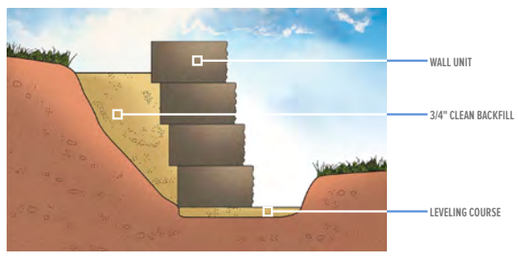

Step 7 Cutting: Using a stone cutter or masonry saw, cut pavers where necessary to fit.

Step 8 Compacting: With two passes of a plate compactor, seat the pavers by forcing sand up into the joints.

Step 9 Sweeping/Final Compaction: Sweep additional sand into joints, compact again and repeat until all joints are filled.

For more detailed instructions, ask your Cambridge Distributor or visit the Homeowner Resource Center / Installation Instructions on www.cambridgepavers.com. Installation guidelines must follow those as instructed by the Concrete Masonry & Hardscapes Association (CMHA).

HOW TO INSTALL YOUR CAMBRIDGE SEGMENTAL RETAINING WALL SYSTEM

Step 1 Excavation: Dig a trench roughly 8" deep and 12" wide. Firmly compact until bottom is fairly level. Add 6" of 3/4" clean gravel and compact again.

Step 2 Leveling Course: Add 1" of coarse C-33 sand into bottom of trench.

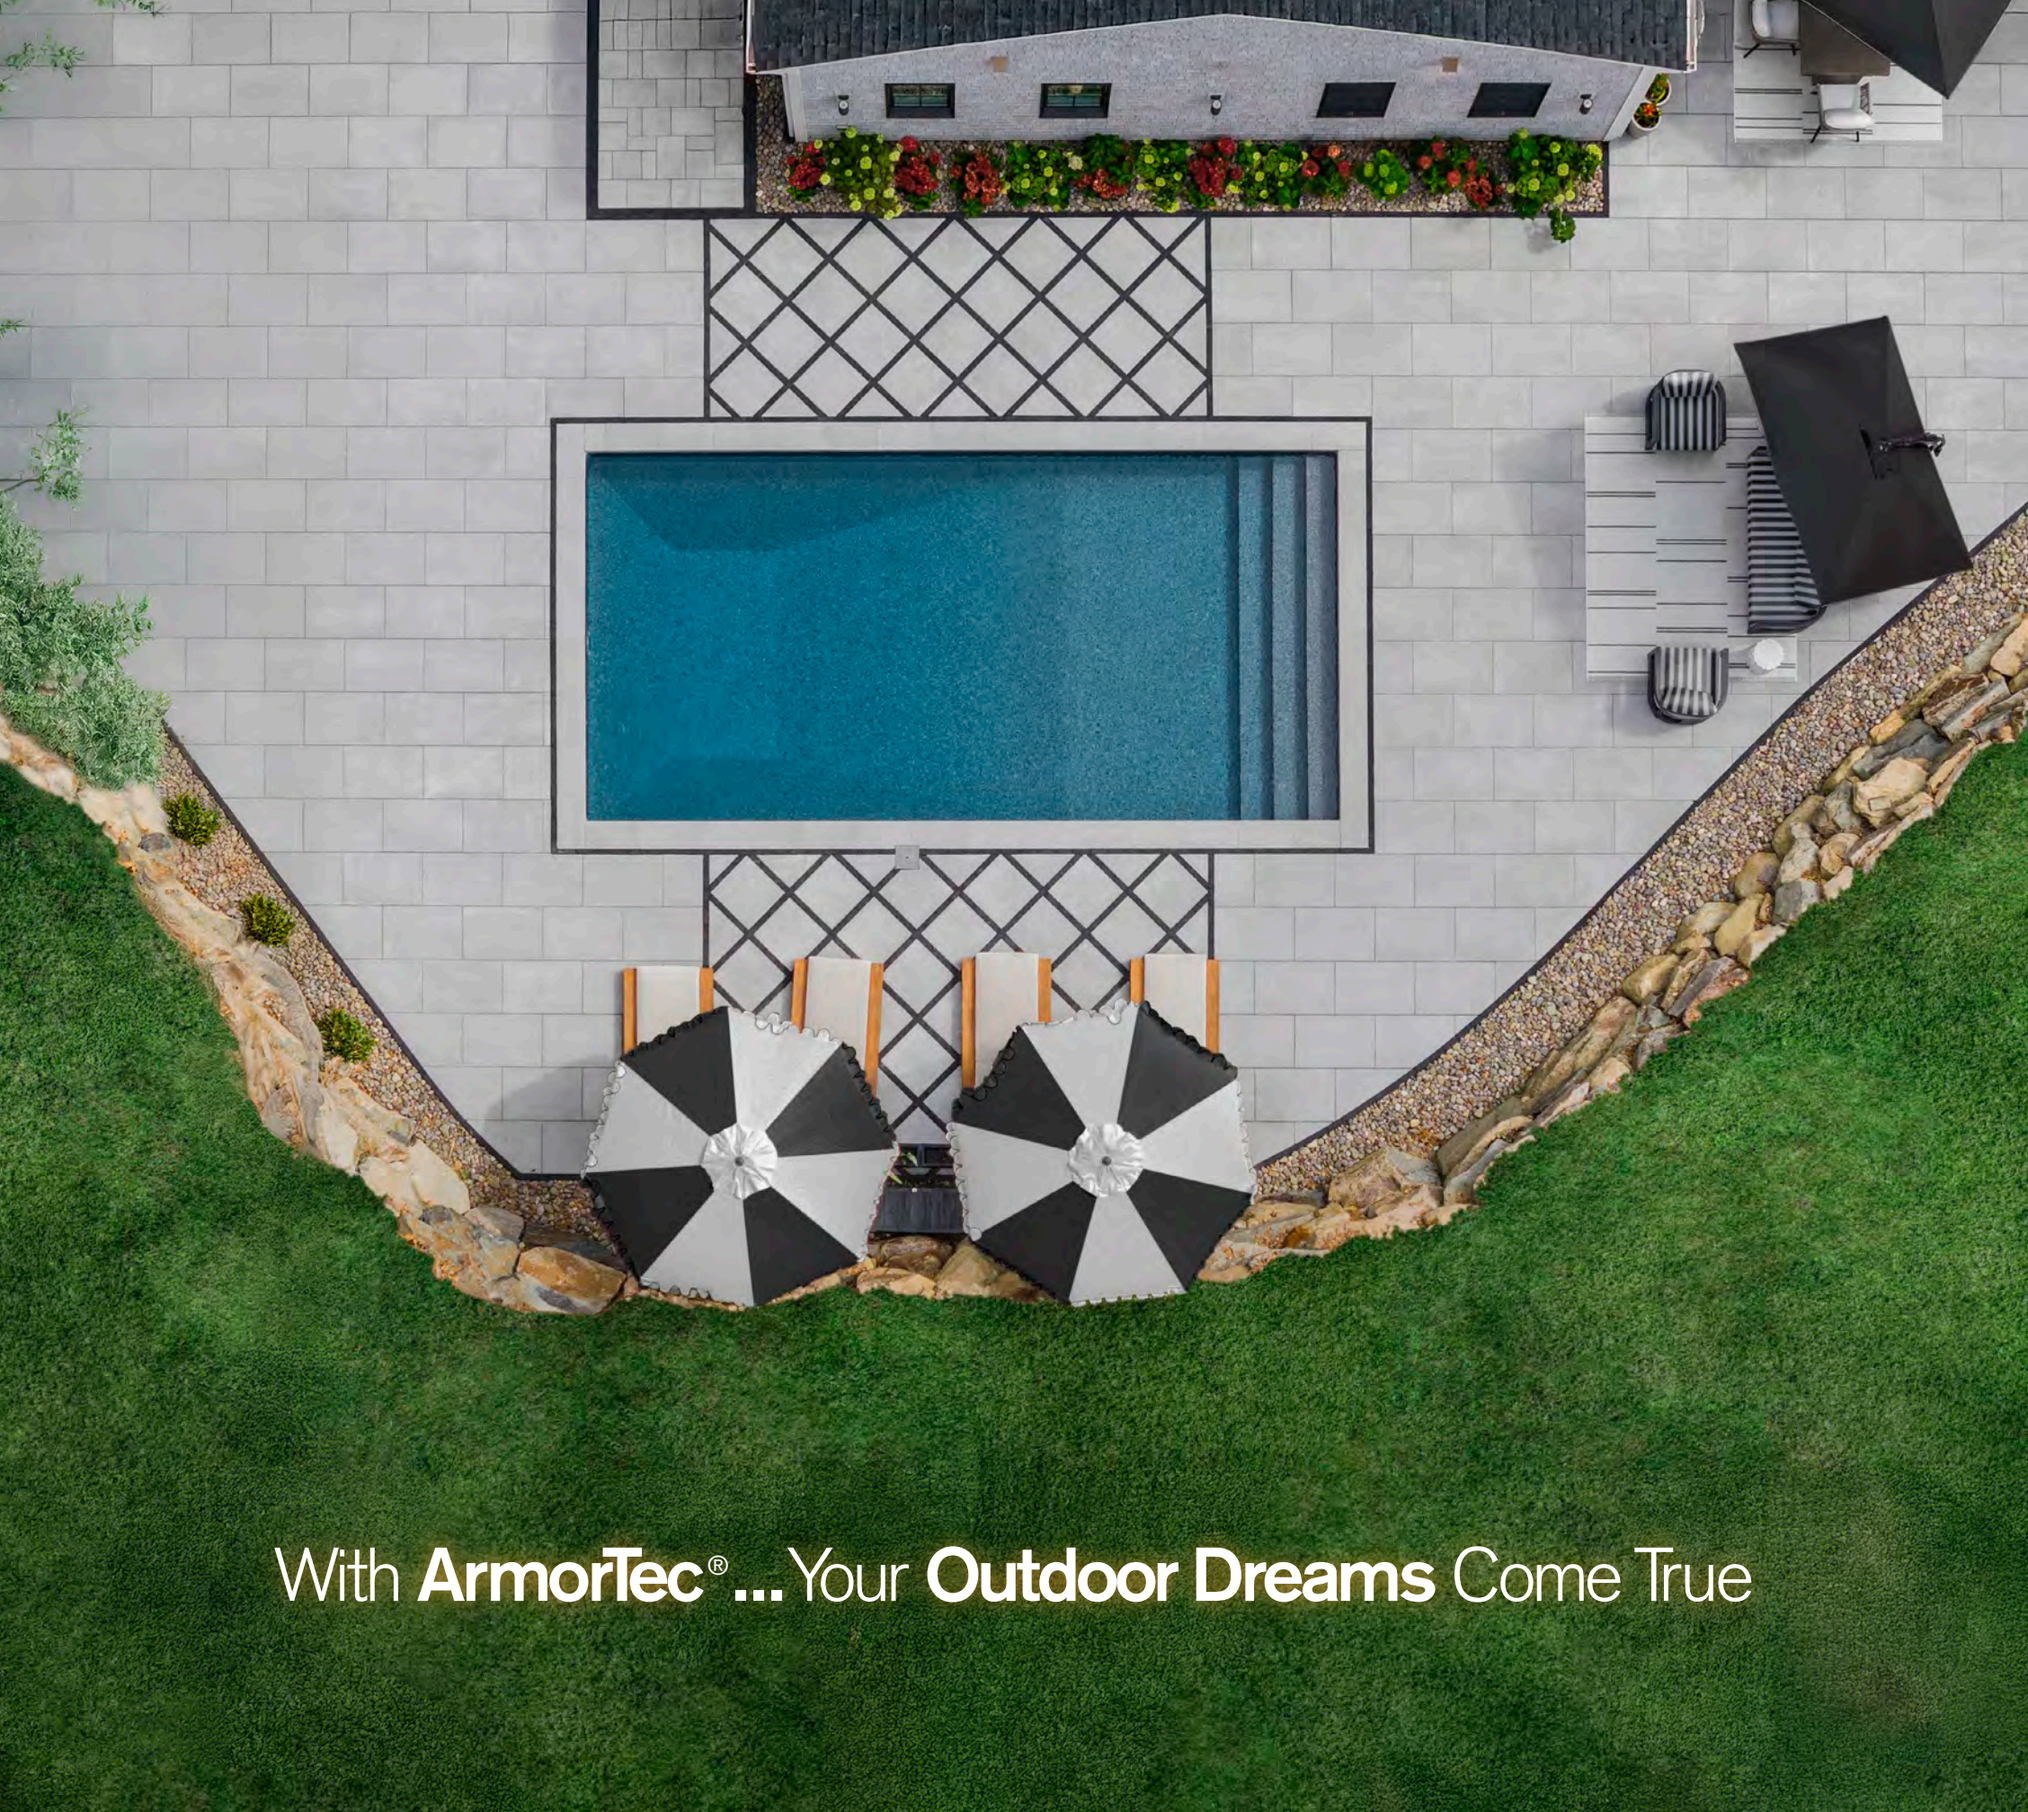

Step 3 First Course: Place Cambridge wall units in trench touching each other (textured face outward on single-face units). Keep all units level in all directions. For straight walls, also use a string line.

Step 4 Additional Courses: Stack staggered wall units on top, stepping each new row back approximately 3/4". In this type of gravity wall installation, weight and set back of the units provide resistance. Backfill with 3/4" clean granular fill and compact as each course is completed. To prevent any granular fill or soil from passing through the system, a landscaping fabric can be placed behind the wall units. Add cap units if desired.

This is the basic recommended procedure for straight, circular and serpentine retaining walls up to 28" high. For higher walls, contact your Authorized Cambridge Distributor for advice. Installation guidelines must follow those as instructed by the Concrete Masonry & Hardscapes Association (CMHA).

XL Smooth 24 X 36 | SAHARA/CHESTNUT LITE
